## **DETAILED ACTION**

### ***Claim Objections***

1. Claim 3 is objected to because of the following informalities: It is not clear to the examiner if the claim requires both “a circular movement” and “a tilting movement” or “at least one of” the movements. It is suggested that the “and” be changed to “or” to clarify this statement. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. There is insufficient antecedent basis for the limitation “the tubular initial workpiece.”

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 4-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Wilch et al. (US Patent 6,230,540). Wilch et al. discloses a method and device for producing a tubular

Art Unit: 3725

workpiece comprising steps of reducing a first area of a tubular initial workpiece (10) with a reducing unit comprising at least one forging die (20A) by a radial forming process for reducing an outer diameter of the workpiece. Forming a transition area (30), extending at an angle relative to the longitudinal axis of the tubular initial workpiece and extending between said first area of the tubular initial workpiece having the reduced outer diameter and a non-reduced second area following the transition area. A second process comprises a step of cold forming (20 B) the transition area of the initial workpiece to obtain a substantially rectangular shoulder of the workpiece (Figure 3).

Regarding claim 4, the particular manner in which the workpiece is produced is given no patentable weight.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wilch et al. in view of Dickson, Jr. (US Patent 6,247,346). Wilch et al. discloses the claimed invention substantially except for wherein the radial forming of the first area is effected by rotary swaging. Dickson, Jr. discloses a method of reducing tube diameters by rotary swaging, Column 8, lines 44-64. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to radial form the first area by rotary swaging because it is a mechanical equivalent.

#### ***Allowable Subject Matter***

5. Claims 2, 3, 8, 9, and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
